P.02

U.S. ENVIRONMENTAL PROTECTION AGENCY  
REGION 10  
1200 SIXTH AVENUE  
SEATTLE, WASHINGTON 98101

MAR 25 1988

REPLY TO  
ATTN OF: WD-134

CERTIFIED MAIL - RETURN RECEIPT REQUESTED

Kenneth D. Brooks, Administrator  
Division of Environment  
Idaho Department of Health and Welfare  
Statehouse  
Boise, Idaho 83720

Re: NPDES Permit No. ID-002540-2  
Cyprus Thompson Creek

Dear Mr. Brooks:

Enclosed for your use in completing a certification action is a copy of the National Pollutant Discharge Elimination System (NPDES) permit which EPA proposes to reissue.

*Substitution*  
Comments received on the draft permit (copy enclosed) have not resulted in any permit changes. However, the limitations for lead and zinc in the proposed final permit (Part I.A.1.) have been changed due to a recalculation of the water quality-based limitations and Parts II, III and IV have been modified to incorporate regulatory language required by the Water Quality Act of 1987. We would appreciate receiving the State Certification at your earliest convenience.

Sincerely,

*Harold*

Harold E. Geren, Chief  
Water Permits and Compliance Branch

Enclosures

cc: Idaho Department of Health and Welfare-DOE, Pocatello

We are also incorporating language in the final permit (Part I.A.1.) that will allow in-stream background levels to be substituted as effluent limitations if the company can provide data that verifies background levels for any parameters exceeding water quality based criteria. In place, however, will be the allowable discharge based effluent guidelines limitations.

2-52

Page 3 of 15  
Permit No.: ID-002540-2

## I. EFFLUENT LIMITATIONS AND MONITORING REQUIREMENTS

### A. Specific Limitations and Monitoring Requirements.

1. During the period beginning on the effective date of this permit, and lasting until the expiration date, discharges from outfalls #001 and #002 shall be limited and monitored by the permittee as specified below:

<u>Effluent Parameter</u>	<u>Effluent Limitation</u>		<u>Monitoring Requirements</u>	
	<u>Daily Avg. (mg/l)</u>	<u>Daily Max. (mg/l)</u>	<u>Frequency</u>	<u>Sample Type</u>
Flow	---	---	Daily	----
Total Suspended Solids (TSS)	20.0	30.0	Weekly	Grab
Arsenic	---	0.490	Monthly	Grab
Cadmium	---	0.0053	Monthly	Grab
Lead	---	0.017	Monthly	Grab
Mercury	---	non-detectable	Monthly	Grab
Copper	---	0.0245	Monthly	Grab
Zinc	---	0.165	Monthly	Grab

(NOTE: All metals shall be analyzed as total recoverable.)

- a. The pH shall not be less than 6.0 standard units, nor greater than 9.0 standard units, and shall be monitored weekly by grab samples.
- b. There shall be no discharge or floating solids or visible foam in other than trace amounts.
- c. Samples taken in compliance with the monitoring requirements specified above shall be taken in the effluent stream below the settling basins.
2. During the period beginning on the effective date of this permit, and lasting until the expiration date, discharges from outfall #003 is authorized. The permittee shall monitor turbidity (above and below the Bruno Creek access road stormwater settling ponds) weekly during February 1 to June 30, and monthly for the other months of the year. This monitoring shall be performed in accordance with requirements of the water quality monitoring program as required by Part I.A.3. below.
3. In addition to the above referenced effluent monitoring requirements, the permittee shall continue to provide for water quality monitoring in accordance with the program agreed upon by the U.S. Forest Service (USFS), Idaho Department of Health and Welfare - Division of Environment (IDHW-DOE) and Cypress, and such future modifications as may be mutually agreed upon by the parties. Instream monitoring results shall be reported quarterly (in March, June, September and December) to EPA and IDHW-DOE at the address given in Part II.C. below.

**DRAFT**

Calculations for  
 Water Quality -Based  
 Limitations for  
 Cyprins ID-00 2540-2

Parameter: Arsenic

Acute Wasteload Allocation (WLA,acute) =	0.72 mg/l
Chronic Wasteload Allocation (WLA,chronic) =	0.91 mg/l
Coefficient of variation (CV) of effluent =	0.60
Monthly sampling frequency required in permit =	1.00 samples/m

Back calculate the long term average (LTA)  
 that will meet both of the above WLAs:

	Acute	Chronic
est s	0.555	0.555
est u, 4d	NA	-0.773
est u, 1d	-1.618	-0.886
LTA	0.231	0.481 mg/l

Lowest LTA = 0.231 mg/l

Using the lowest LTA and CV from above, derive the  
 Maximum Daily and Monthly Average permit limits

	Percentile Basis	
	95th %ile	99th %ile
est s2	0.307	0.307
est u	-1.618	-1.618
Maximum Daily =	0.494	0.720 mg/l
Monthly	n = 1.000	
	est s2,n	0.307
	est u,n	-1.618
Monthly Average =	0.494	0.720 mg/l

Draft permit  
 0.49 mg/l

2/67

## Parameters: Cadmium

Acute Wasteload Allocation (WLA,acute) = 7.80 ug/l  
 Chronic Wasteload Allocation (WLA,chronic) = 5.30 ug/l  
 Coefficient of variation (CV) of effluent = 0.60  
 Monthly sampling frequency required in permit = 1.00 samples/a

Back calculate the long term average (LTA)  
 that will meet both of the above WLAs:

	Acute	Chronic
est s	0.555	0.555
est u, 4d	NA	0.985
est u, 1d	0.764	0.874
LTA	2.504	2.795 ug/l

Lowest LTA = 2.504 ug/l

Using the lowest LTA and CV from above, derive the Maximum Daily and Monthly Average permit limits

	Percentile Basis	
	95th %'ile	99th %'ile
est s2	0.307	0.307
est u	0.764	0.764
Maximum Daily =	5.347	7.800 ug/l
Monthly	<i>0.0053 mg/l</i>	
n =	1.000	
est s2,n	0.307	0.307
est u,n	0.764	0.764
Monthly Average =	5.347	7.800 ug/l

*Draft permit*  
*0.0053 mg/l*

*3/6/87*

## Parameter: Lead

Acute Wasteload Allocation (WLA,acute) = 164.00 ug/l  
 Chronic Wasteload Allocation (WLA,chronic) = 15.00 ug/l  
 Coefficient of variation (CV) of effluent = 0.60  
 Monthly sampling frequency required in permit = 1.00 samples/m

Back calculate the long term average (LTA)  
 that will meet both of the above WLAs:

	Acute	Chronic
est s	0.555	0.555
est u, 4d	NA	2.025
est u, 1d	3.810	1.915
LTA	52.658	7.912 ug/l

Lowest LTA = 7.912 ug/l

Using the lowest LTA and CV from above, derive the Maximum Daily and Monthly Average permit limits

Percentile Basis  
 95th %'ile 99th %'ile

est s2	0.307	0.307
est u	1.915	1.915
Maximum Daily =	16.890	24.640 ug/l
Monthly n =	1.000	$= 0.01689 = .017 \text{ mg/l}$
est s2,n	0.307	0.307
est u,n	1.915	1.915
Monthly Average =	16.890	24.640 ug/l

Draft permit = .015 mg/l  
 proposed final permit = .017 mg/l

4/6/7

## Parameter: Mercury

Acute Wasteload Allocation (WLA,acute) = 4.80 ug/l  
 Chronic Wasteload Allocation (WLA,chronic) = 0.06 ug/l  
 Coefficient of variation (CV) of effluent = 0.60  
 Monthly sampling frequency required in permit = 1.00 samples/m

Back calculate the long term average (LTA)  
 that will meet both of the above WLAs!

	Acute	Chronic
est s	0.555	0.555
est u, 4d	NA	-3.548
est u, 1d	0.279	-3.658
LTA	1.541	0.030 ug/l

Lowest LTA = 0.030 ug/l

Using the lowest LTA and CV from above, derive the  
 Maximum Daily and Monthly Average permit limits

	Percentile Basis	
	95th %'ile	99th %'ile
est s2	0.307	0.307
est u	-3.658	-3.658
Maximum Daily =	0.064	0.094 ug/l

Monthly	n =	1.000
est s2,n	0.307	0.307
est u,n	-3.658	-3.658
Monthly Average =	0.064	0.094 ug/l

Draft permit  
 non-detectable

5/17

## Parameter: Copper

Acute Wasteload Allocation (WLA,acute) = 36.00 ug/l  
 Chronic Wasteload Allocation (WLA,chronic) = 57.60 ug/l  
 Coefficient of variation (CV) of effluent = 0.60  
 Monthly sampling frequency required in permit = 1.00 samples/m

Back calculate the long term average (LTA)  
 that will meet both of the above WLAs:

	Acute	Chronic
est s	0.555	0.555
est u, 4d	NA	3.371
est u, 1d	2.294	3.260
LTA	11.559	30.380 ug/l

Lowest LTA = 11.559 ug/l

Using the lowest LTA and CV from above, derive the  
 Maximum Daily and Monthly Average permit limits

	Percentile Basis	
	95th %'ile	99th %'ile
est s <sup>2</sup>	0.307	0.307
est u	2.294	2.294
Maximum Daily =	24.678	36.000 ug/l
Monthly n =	1.000	$\approx 0.244678 \text{ mg/l}$
est s <sup>2</sup> ,n	0.307	0.307
est u,n	2.294	2.294
Monthly Average =	24.678	36.000 ug/l

Draft permit  
 $\approx 0.245 \text{ mg/l}$
